Create User (Admin Only)

Context:

- The **Admin** creates new users in the system.

- New users **receive login credentials** and must confirm their email.

Primary Flow:

1. Admin navigates to **User Management**.

2. Admin clicks **"Create User"**.

3. System presents a form requesting:

   o **Username**

   o **Email**

   o **Role** (**Manager / Employee**)

   o **Temporary password** (auto-generated or manually set)

4. Admin submits the form.

5. System **stores the new user**.

6. System sends an **email with login instructions**.

7. User logs in using the **temporary password**.

8. System **prompts the user to change their password**.

Alternative Flows:

- **User does not confirm email within 24 hours:**

   o A1. System sends a **reminder email**.

   o A2. If unconfirmed after **48 hours**, system **disables the account** until confirmed.

- **Admin tries to create a user with an existing email:**

   o A1. System informs admin that the email is **already in use**.

   o A2. Admin must enter a **different email**.
